

Git and Reproducible Project Structure

Turn notebooks into maintainable projects that obtain and expose data.

Learning outcomes

01

Use focused commits and branches.

02

Separate source, tests, data, notebooks, and configuration.

03

Recreate an environment from declared dependencies.

The concept system

01

Git history

02

branching

03

project layout

04

environments

A repeatable reasoning loop

Refactor the week-one notebook into an installable repository.

Guided lab

LAB BRIEF

Refactor the week-one notebook into an installable repository.

workbook / tests / evidence

01

Frame

Define inputs, outputs, and success criteria.

02

Build

Implement the smallest correct workflow.

03

Verify

Test normal, boundary, and failure cases.

04

Explain

Record the evidence and remaining limits.

Portfolio deliverable

A repository with tests, a dependency lock, and meaningful commits.

QUALITY GATE

-  **Reproducible**
-  **Tested**
-  **Decision-relevant**

WEEKLY ASSESSMENT

Public Data Explorer

Reliability 30%, architecture 25%, interface 20%, documentation 15%, Git practice 10%.

What should remain after the lesson?

CONCEPT

Git history + branching

PRACTICE

Refactor the week-one notebook into an installable repository.

EVIDENCE

A repository with tests, a dependency lock, and meaningful commits.
