

Logistic Regression, Probability and Thresholds

Build calibrated classification workflows and decision thresholds.

Learning outcomes

01  Separate probability estimates from class decisions.

02  Select a threshold from costs and capacity.

03  Assess calibration and ranking.

The concept system

01

logistic regression

02

probability

03

thresholds

04

calibration

A repeatable reasoning loop

Build a lead-prioritization model under a review-capacity limit.

Guided lab

LAB BRIEF

Build a lead-prioritization model under a review-capacity limit.

workbook / tests / evidence

01 **Frame**

Define inputs, outputs, and success criteria.

02 **Build**

Implement the smallest correct workflow.

03 **Verify**

Test normal, boundary, and failure cases.

04 **Explain**

Record the evidence and remaining limits.

Portfolio deliverable

A threshold policy with calibration and cost analysis.

QUALITY GATE

- **Reproducible**
- **Tested**
- **Decision-relevant**

WEEKLY ASSESSMENT

Rare-Event Classifier

Leakage 25%, metrics 25%,
threshold 20%, calibration 15%,
communication 15%.

What should remain after the lesson?

CONCEPT

logistic regression + probability

PRACTICE

Build a lead-prioritization model under a review-capacity limit.

EVIDENCE

A threshold policy with calibration and cost analysis.
