

Serving, Testing and Monitoring

Package an end-to-end classifier as a tested, observable service.

Learning outcomes

01  Expose inference through a validated endpoint.

02  Test normal, boundary, and invalid requests.

03  Define service, data, and model signals.

The concept system

01

REST inference

02

contract tests

03

logging

04

drift

A repeatable reasoning loop

Serve the model with FastAPI and instrument structured logs.

Guided lab

LAB BRIEF

**Serve the model with FastAPI
and instrument structured
logs.**

[workbook](#) / [tests](#) / [evidence](#)

01

Frame

Define inputs, outputs, and success criteria.

02

Build

Implement the smallest correct workflow.

03

Verify

Test normal, boundary, and failure cases.

04

Explain

Record the evidence and remaining limits.

Portfolio deliverable

A container-ready API with tests and a monitoring specification.

QUALITY GATE

-  **Reproducible**
-  **Tested**
-  **Decision-relevant**

WEEKLY ASSESSMENT

Production Inference Service

API 25%, tests 25%, artifact 20%, observability 20%, documentation 10%.

What should remain after the lesson?

CONCEPT

REST inference + contract tests

PRACTICE

Serve the model with FastAPI and instrument structured logs.

EVIDENCE

A container-ready API with tests and a monitoring specification.
