

Containers, Cloud Architecture and CI

Automate reliable releases and make model behavior observable.

Learning outcomes

- 01  Package a minimal repeatable container.
- 02  Separate runtime configuration from source.
- 03  Build CI for tests, quality, and images.

The concept system

01

Docker

02

configuration

03

CI and CD

04

cloud services

A repeatable reasoning loop

Containerize the inference service and run its CI workflow.

Guided lab

LAB BRIEF

Containerize the inference service and run its CI workflow.

[workbook](#) / [tests](#) / [evidence](#)

01

Frame

Define inputs, outputs, and success criteria.

02

Build

Implement the smallest correct workflow.

03

Verify

Test normal, boundary, and failure cases.

04

Explain

Record the evidence and remaining limits.

Portfolio deliverable

A tested image, architecture diagram, and deployment runbook.

QUALITY GATE

-  **Reproducible**
-  **Tested**
-  **Decision-relevant**

WEEKLY ASSESSMENT

Releasable ML System

Reproducibility 25%, CI 20%, architecture 20%, lineage 20%, operations 15%.

What should remain after the lesson?

CONCEPT

Docker + configuration

PRACTICE

Containerize the inference service and run its CI workflow.

EVIDENCE

A tested image, architecture diagram, and deployment runbook.
